

Fleet Management

Premium Video Service

Improve safety and reduce go-backs with real-time and recorded video footage direct from your trucks.

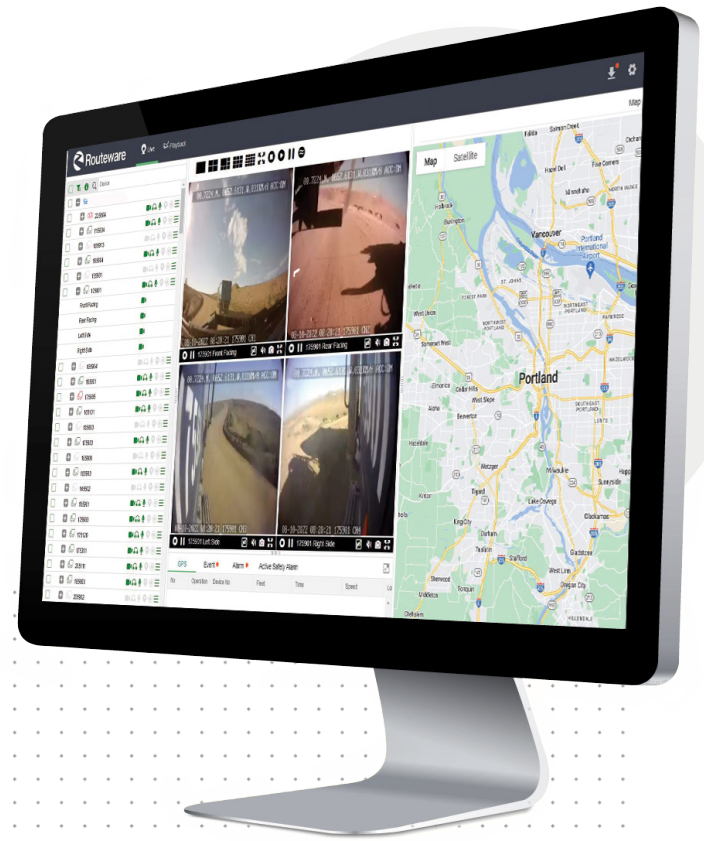

- ✓ Prevent accidents
- ✓ Exonerate drivers
- ✓ Reduce insurance costs
- ✓ Record extras and contamination

Cut down on complaints by sharing video with customers

Give your staff access to video as they speak to customers, so they can push back on false reports of missed collections to reduce the frequency of go-backs and repeat calls.

Improve driver behavior by supplementing coaching with video

Add video alongside performance and telematic information to easily and effectively coach drivers on specific aspects of their driving using real-world examples.

Reduce accidents and insurance claims with video evidence

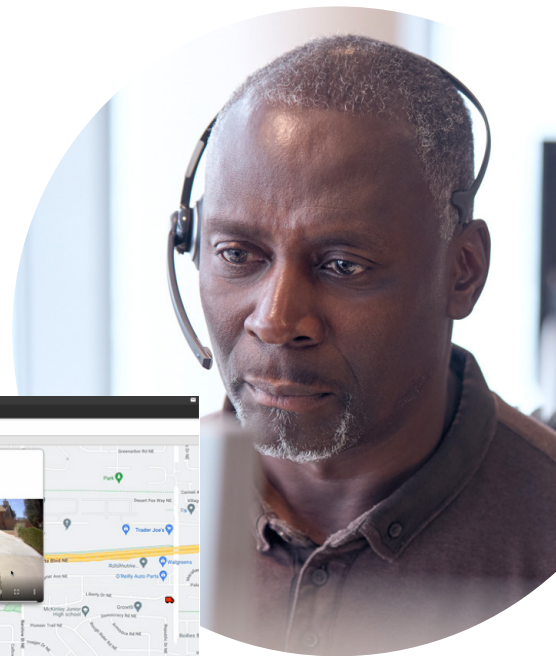

Use high-quality video footage from multiple angles to help determine the true cause of accidents and provide robust evidence that your drivers weren't at fault.

Keep everyone safe with rear-view cameras

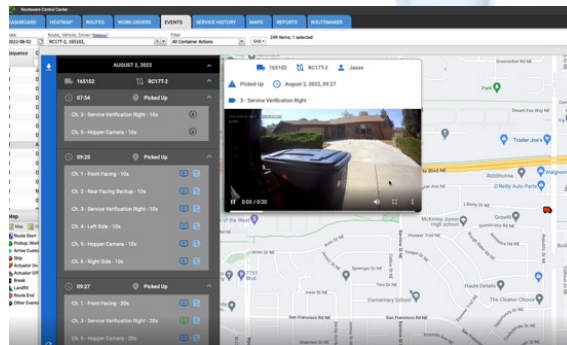

Use rear-view cameras to provide greater visibility to drivers when backing-up, making them aware of potential dangers and less likely to have an accident.

Key Features

- **360-degree cameras** - capture high-quality photos of events all around the truck. Cameras covering service area provide clear evidence of contamination, not-outs and additional chargeable collections.
- **Live video** - stream live video from any camera on any truck to monitor events in real-time.
- **Recorded video** - pull video clips for a specified time from the truck's video recorder to be viewed and retained as required.
- **Back-office integration** - request video from within your Routeware fleet management systems to make it quicker and easier to get what you need.
- **Tracking** - use GPS to track the real-time location of your video-equipped vehicles on a map.
- **Automations** – capture video automatically for trigger events, such as harsh driving or accidents.
- **Sharing** - download videos, or shorter segments, to your local machine to share with customers or colleagues.
- **Photo capture** - take photo snapshot from within the live video stream to record and share specific moments.
- **Scalable and future-proof** - add additional cameras at very low cost.

Location and time stamps provide evidence of when and where video was captured.

Quickly and easily request and view videos from within Routeware Control Center.
